

G O M A

USER MANUAL

Thank you

Thank you for purchasing GOMA module.

GOMA stand for Generator, Offset, Mixer, Attenuverter.

Behind GOMA the idea was to improve essential modules like Shades from Mutable instruments or Quadratt from Intellijel.

We wanted to design a small module so it could fit in any case. We want it to be ergonomic and easy to use despite is size. But we also wanted to pack as much features as possible to make of it a "swiss knife module".

The result is GOMA a 4HP width module, that Unlike Shades or Quadratt feature a control to switch normalised input to +5V or +10V on each channel.

GOMA also features a expander allowing to daisychain multiples modules to create virtually infinite mixer/offset generator.

GOMA is so flexible that we use in all our patchs, we are very please about it and we hope you'll like as much as we are.

**1**

Unplug you rack power from the main.

General Specifications**Power Consumption**

+12V : 33mA
-12V : 33mA
+5V : 0mA

**Panel Width**

4HP

**Module Depth**

20mm - skiff friendly

2

As shown on the sketch on the right, align the red line from the power ribbon cable with the line draw next to the power connector.

3

Check twice the alignment of the ribbon cable.

4

Plug you rack power to the main and power you rack.

5

Set each channel to Polarizer / 10V
Use feedback LED to test each channel
Set each knob to 0% feedback LED should be red
Set each knob to 100% feedback LED should be Green

6

If the feedback LED light up like they should do you module is ready, if not please contact us at : contact@blacknoisemdodular.com

Warranty

BLACK NOISE warrants is products to be free of defects in materials or workmanship and to be conform with the specifications at the time of shipment for a period of two years from the date of purchase.

During that period any malfunctionning or damaged units will be repaired, service and calibrated into your workshop. This warranty does not cover any problems resulting from damages during shipping, incorrect installation or power supply, abusive treatement, or any other obvious user-inflicted fault.

If your product warranty is passed, it still can be serviced as long as parts are available in our workshop. We reserve the right to charge for labor, parts and transit expenses where applicable.

Before sending your product to our workshop please contact us for RMA and details. Any unsolicited parcel will be rejected and or returned. The postage to our workshop is on the customer. The return of your module is on us. BLACK NOISE can not take any responsibility for damages caused during transport.

Sections

GOMA can be use as a flexible mixer with virtually infinite channels. The modules is made of 3 identical sections. If nothing is plug into the output of a section the signal flow into the next section. You can also you the extension port on the backside to daisy chain multiples modules allowing to create infinite mixer.

2 Range Selector

5v Range selected

5

10

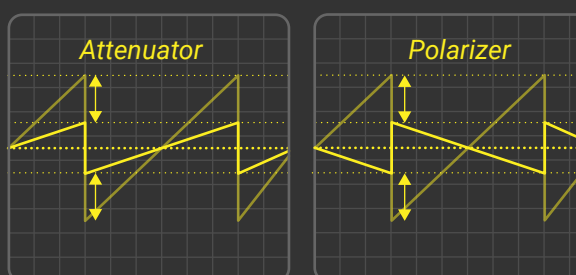

10v Range selected

5

10

The input of each sections is normalized to either +5V or +10V. The dedicate switch allow to switch between each mode.

4 Mode Control

According the selected mode, the control knob allow you to attenuate or invert the input signal.

1 Mode Selector

Polarizer selected

Attenuator selected

GOMA can be use as a Polarizer also known as attenuverter or as Attenuator. The dedicate switch allow to switch between each mode.

2A 2B +5V/+10V

Attenuator mode
In attenuator mode and according to the selected voltage mode you can generator voltage from 0V up to +10V.

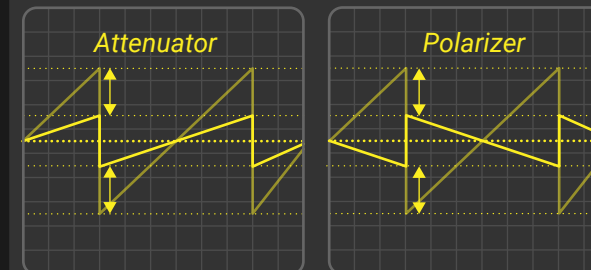

Polarizer mode
In polarizer mode and according to the selected voltage mode you can generator voltage from -10V up to +10V.

5 Signal Input

Input for your signal to process. Each input is normalized to +5V or +10V according to the selected mode.

1A 1B Attenuator/Polarizer

Attenuator mode
Attenuator mode allow to attenuate the input signal.

Polarizer mode
The polarizer also known as Attenuverter allow not only to attenuate the signal but also to invert it.

3 Signal Feedback

Each section features is own feedback LED. The LED display the processed signal going into the output.

For positive voltage the LED light up in green, negative voltage are displayed in red.

6 Signal Output

Output of the processed signal. If no jack is plugged the signal go into the next section allowing for offsetting or mixing signals.

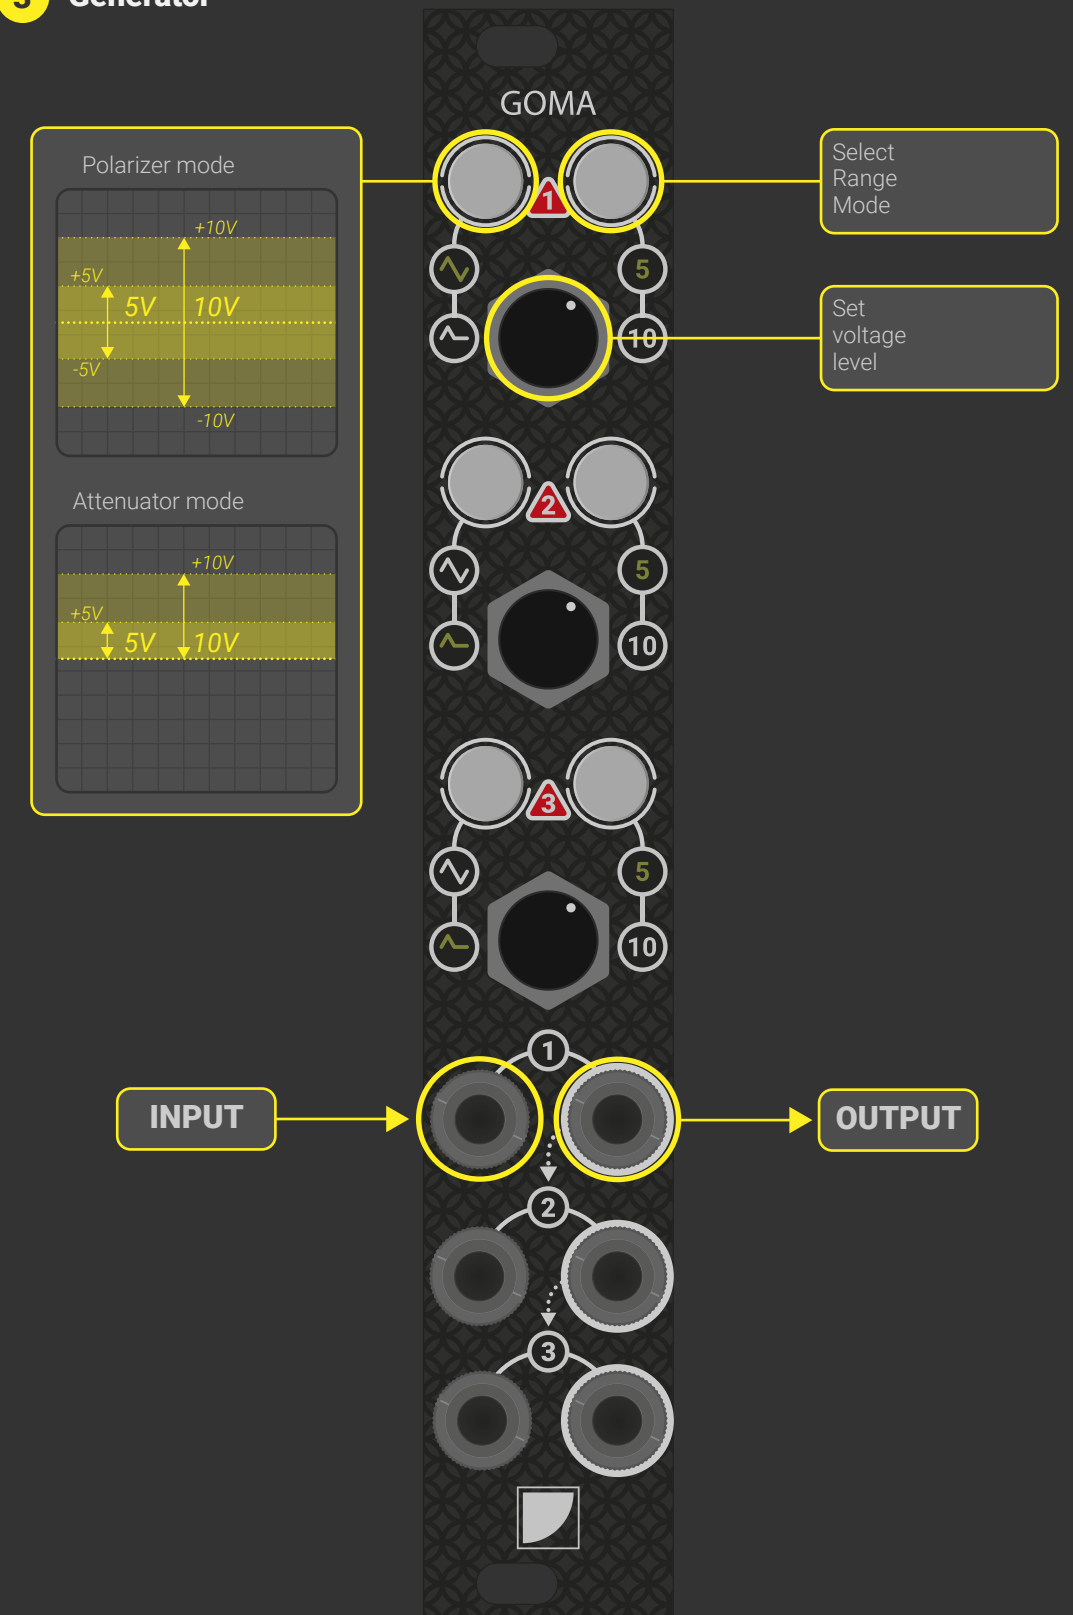

1 Attenuator

2 Polarizer

3 Generator

4 Offset

5 Mixer

How to daisy chain GOMA modules

GOMA modules can be daisy chain to create virtually infinite mixer/off-set generator.

To daisy chain module simply connect the included jumper cable from the "O" pin of the first module to the "I" of the second module. Repeat this procedure to connect each extra modules
